AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

The listing of claims will replace all prior versions, and listings, of claims in the application.

LISTING OF THE CLAIMS

1. (Currently Amended) A method of performing software demonstration comprising: providing an identified user with access, via a network, to a server comprising a program to be demonstrated; receiving code from said identified user; executing on said server said program to be demonstrated using said code received from said identified user and, providing any results of said execution based on the execution of the demonstration program manipulating the code received from said identified user.

2. (Original) a method as in claim 1 wherein said server is a highly secured server.

3. (Original) A method as in claim 1 wherein said providing an identified user with access, via a network, to a server comprising a program to be demonstrated further comprises identifying a user and providing said identified user with access, via a network, to a server comprising a program to be demonstrated.

4. (Original) A method as in claim 1 wherein said providing an identified

user with access, via a network, to a server comprising a program to be

demonstrated further comprises identifying a user and providing said

identified user with access, via the Internet, to a server comprising a

program to be demonstrated.

5. (Original) A method as in claim 4 wherein said identifying a user further

comprises identifying a user through supplying a user with a unique,

operational email address.

6. (Original) A method as in claim 4 wherein said identifying a user further

comprises identifying a user through supplying a user with a unique,

operational user ID.

7. (Original) A method as in claim 1 wherein said providing an identified

user with access, via a network, to a server comprising a program to be

demonstrated further comprises providing an identified user with access, via

a network, to a server comprising an email scanning program to be

demonstrated.

8. (Original) A method as in claim 1 wherein said providing an identified

user with access, via a network, to a server comprising a program to be

demonstrated further comprises providing an identified user with access, via

a network, to a server comprising a proscribed code scanner program to be

demonstrated.

9. (Original) A method as in claim 1 wherein said receiving code from said

identified user further comprises receiving email from said identified user.

10. (Currently amended) A method as in claim 9 wherein said receiving

email from said identified user further comprises receiving a predetermined

amount of email from said identified user, wherein said email comprises

code received from said user, and wherein said program to be demonstrated

uses said email.

11. (Original) A method as in claim 1 wherein said receiving code from

said identified user further comprises receiving code for a predetermined

time from said identified user.

12. (Original) A method as in claim 1 wherein said executing said program

to be demonstrated using said code further comprises executing an email

scanning program to be demonstrated using email provided by said user.

13. (Original) A method as in claim 1 wherein said providing any results of

said execution further comprises providing any results of said execution via

a web page.

14. (Original) A method as in claim 1 further comprising providing said identified user with an option to purchase said program.

15. (Original) A method as in claim 1 further comprising providing said server with a secure shut down mechanism.

16. (Previously presented) A method of performing software demonstration comprising: providing an identified user with access, via a network, to a server comprising at least two programs to be demonstrated; receiving code from said identified user; executing on said server said programs to be demonstrated using said code; and, providing any results of said execution, and wherein each of said programs to be demonstrated is executed on the same user code received form said identified user.

17. (Previously presented) A method of performing software demonstration comprising: identifying a user; providing said identified user with access, via the Internet, to a server comprising a program to be demonstrated; receiving email from said identified user, said email comprising code upon which said execution results are derived through said program execution on said email code; executing on said server said program to be demonstrated using said email as the target of said demonstration; and, providing any results of said execution

via a web page.

18. (Currently amended) An apparatus for software demonstration comprising: a

server including a storage component and being configured with a program to

be demonstrated installed thereon in said storage component; [[,]] said server

being accessible to an identified user, said server being configured to receive

code from said identified user machine, execute said received code with said

program to be demonstrated, and provide results of said execution based on the

application of said program to be demonstrated to said code, wherein said server

and said program to be demonstrated installed thereon are configured to

manipulate said received code to provide a result, based on said received code

that corresponds with the program to be demonstrated to provide the results that

would have been obtained if the program were installed on the user machine

from which the received code was obtained, wherein said apparatus further

includes a network in which said code is received by said server from said

identified user.

19. (Original) An apparatus as in claim 18 wherein said program to be

demonstrated comprises an email scanning program.

20. (Previously presented) An apparatus as in claim 18 wherein said server is

configured to receive email from said identified user.

21. (Original) An apparatus as in claim 18 wherein said server is accessible to

said identified user via the Internet.

22. (Original) An apparatus as in claim 18 wherein said server is configured to

provide results of said execution via a web page.

23. (Original) An apparatus as in claim 18 wherein said apparatus is in

distributed form.

24. (Currently amended) An article of manufacture comprising at least one

server with a storage component and being configured with a program to be

demonstrated installed thereon and being configured with a web site providing

access to a program to be demonstrated, whereby said program to be

demonstrated executes with said server said code provided by an identified user

and said web site further provides results of said execution.

25. (Original) An article as in claim 24 wherein said website further provides

results of said execution via a web page.

26. (Previously presented) A method as in claim 13, wherein said web page

accessible to one or more of said user and others.

27. (Previously presented) The method of claim 1, wherein said server and said program to be demonstrated are configured to execute said program to be demonstrated by manipulating said received code as part of said program execution to provide a result based on said received code that corresponds with the execution of said program to be demonstrated using said received code, and,

wherein said results provided comprise the results that would have been obtained if the program were installed for operation on the user machine from which the received code was obtained.

28. (Previously presented) The method of claim 27, wherein said user upload of said code that is to be received by said server from said user for use in execution by the demonstration program is automatically configured to upload said code to be run to the server, and wherein said server is configured to run said received user code.

29. (New) A method of performing software demonstration for demonstration of an antivirus scanner program on user supplied email comprising:

- providing a server having a communications link and being configured with an antivirus scanner program;

- providing an identified user with access, via a network, to a server comprising a program to be demonstrated;

- identifying the user by a unique email address;

- wherein said email address comprises a destination for the user's email to

be tested for the demonstration;

- communicating using said email address email for scanning by said

antivirus scanner program to be demonstrated;

- demonstrating attributes of said antivirus scanning program on said

communicated email by scanning said email for proscribed code;

- providing results of said demonstrated attributes of said program on said

emails to a server and displaying said results as a web page;

- accepting a log on to said server from said identified user associated with

said unique email address for retrieval of said demonstration results.

30. (New) The method of claim 29, wherein the demonstration comprises a

plurality of programs that may be comparatively demonstrated.

31. (New) The method of claim 29, wherein providing an identified user with

access includes generating a unique operational email address for the user.

32. (New) A method of performing software demonstration for demonstration

of a program on user supplied code comprising:

- providing a server having a communications link and being configured

with a program to be demonstrated;

- providing an identified user with access, via a network, to a server comprising said program to be demonstrated, including generating a unique operational email address for the user;

- identifying the user by a unique email address;

- communicating to said server containing said program to be demonstrated user code specific to the demonstration for manipulation by said program to be demonstrated;

- demonstrating attributes of said program on said communicated user code by implementing said program operations on said communicated user code;

- providing results of said demonstrated attributes of said program on said communicated user code to a server and displaying said results as a web page;

- accepting a log on to said server from said identified user associated with said unique email address for retrieval of said demonstration results.

33. (New) The method of claim 32, wherein said email address comprises a destination for the user's email to be tested for the demonstration.
